AI Slop Pattern Linter Upload Guide

Nov 9, 2026 · @Andy

The AI Slop Pattern Linter edits drafts so they read like a sharp human wrote them, keeping the writer's own voice, or flags AI-slop patterns without rewriting. Upload it once and Claude uses it whenever you ask for a draft to be tightened or checked.

Upload

The whole skill is one file, `SKILL.md`, with its self-check list built in, so there is nothing else to add.

1. **Download the file.** Save `ai-slop-pattern-linter.zip` (the `SKILL.md` inside an `ai-slop-pattern-linter` folder).
2. **Open Skills in Claude.** Click *Customize* in the sidebar, then the *Skills* tab.
3. **Upload it.** Click *+ Add*, choose *Upload skill* and pick `ai-slop-pattern-linter.zip`. Leave the file inside it unchanged.
4. **Check it's on.** The skill appears as `ai-slop-pattern-linter` in your skills list. Open it and check the toggle next to *Try in chat* is on.

Don't rename the file or the folder inside the zip. Claude matches the folder name to the skill name, and a mismatch is a common reason an upload fails. This Skill only edits text, so it doesn't need *Create and edit files*.

Using it

Paste a draft and say which job you want. Claude picks the skill up from the request, or you can type `/ai-slop-pattern-linter` first.

Say who the piece is for and where it will run. If you don't, it asks once before editing. It keeps your voice, bluntness and humour, and it won't add facts, stats or sources you didn't give it.

Ask	Job	What you get back
"Tighten this LinkedIn post" or "make this sound less like AI"	Edit (default)	The full edited draft plus a short What changed note
"Does this read as AI?" or "lint this, don't rewrite it"	Detect	Each pattern found, the line it's in, and a short fix; no rewrite and no score

Good to know

To change a rule, edit `SKILL.md`, re-zip the folder and upload it again under Customize, then Skills. The banned word list, the patterns and the Self-check at the end all live in that one file.

Check the output yourself. The skill flags patterns; it doesn't prove who wrote something, so don't treat its findings as an AI detector's verdict.
