Infographic Animator: install and customise

Nov 9, 2026 · @Andy

This Skill turns a finished infographic into an animated GIF for LinkedIn, X or Substack Notes. Either the graphic builds itself in reading order (the highlighter wipes in, numbers count up, line art draws itself, sections fade in) and then holds, or the finished graphic stays whole and its parts come alive in a loop.

It's an add-on to the LinkedIn infographic builder Skill. Install that one too, make your infographic with it, then ask for the GIF in the same chat. It also works on any other 4:5 infographic from just the PNG, with simpler motion.

Install it in the Claude app

1. **Turn on file creation.** Settings, then Capabilities, then *Create and edit files*. Skills need this on. On Team or Enterprise, an admin may need to allow it for your organisation. The Skill renders the GIF with code.
2. **Open Skills.** Click *Customize* in the sidebar, then the *Skills* tab.
3. **Upload the ZIP.** Click *+ Add*, choose *Upload skill* and pick `infographic-animator.zip`. Don't unzip it first.
4. **Check it's on.** Open the Skill from your list. The toggle next to *Try in chat* should be on, and the infographic builder's too.

Or in Claude Code

Unzip it and move the `infographic-animator` folder into `~/.claude/skills/`, or `.claude/skills/` inside one project. It renders on your own machine, so it needs Python with Playwright and Pillow; Claude installs them the first time if they're missing.

Make it yours

Open `SKILL.md` and fill in the *Make it yours* block near the top:

Setting	What it does
`default_mode`	build: the graphic assembles itself. loop: the finished graphic comes alive (gears turn, a character blinks).
`hold_seconds`	How long the finished graphic stays on screen before the GIF starts again.
`substack_cut`	Whether to also make a lighter version under Substack Notes' size limit.
`channels`	Where your GIFs go, so it sizes them right.

Re-zip the folder (the folder, not the file inside it) and upload it again under Customize, then Skills.

Your first GIF

1. Make an infographic with the infographic builder, or attach a 4:5 PNG you already have.
2. Ask: "animate this infographic", or "make the characters move" for loop mode.
3. It writes the reading order, renders the GIF, looks at the frames and fixes anything that jumps or flickers.
4. You get the GIF, the Substack cut and the timeline file, so you can re-render after a design change.

Keep the static PNG too: carousels, thumbnails and anything that won't play a GIF still need it.

If something goes wrong

Problem	Fix
Upload fails	Zip the folder, not SKILL.md on its own. The folder name has to match the `name:` line inside it.
No GIF comes back	Check *Create and edit files* is on under Settings, then Capabilities, and the Skill's toggle is on under Customize, then Skills. In Claude Code, let Claude install Playwright and Pillow.
The GIF is too big for Substack	Ask for the Substack cut. It keeps under about 2.4 MB.
Only simple fades	It only had the PNG. Make the graphic with the infographic builder in the same chat so it can read the HTML.
