LinkedIn Infographic Builder: install and customise

Nov 9, 2026 · @Andy

This Skill turns an article, a newsletter issue or a report into one LinkedIn infographic in your brand, with your face in the footer. It is laid out at 1080×1350 (the 4:5 portrait shape) and exported at 2160×2700, so the text stays sharp on phones. Install it once, point it at your brand, and every infographic after that comes out in your colours.

Install it in the Claude app

1. **Turn on file creation.** Settings, then Capabilities, then *Create and edit files*. Skills need this on. On Team or Enterprise, an admin may need to allow it for your organisation.
2. **Open Skills.** Click *Customize* in the sidebar, then the *Skills* tab.
3. **Upload the ZIP.** Click *+ Add*, choose *Upload skill* and pick `linkedin-infographic-builder.zip`. Don't unzip it first.
4. **Check it's on.** Open the Skill from your list. The toggle next to *Try in chat* should be on.

Or in Claude Code

Install it as a plugin:

```
/plugin marketplace add goodvibemarketer/marketing-skills
/plugin install linkedin-infographic-builder@goodvibemarketer-marketing-skills
```

Or unzip it and move the folder into `~/.claude/skills/` to have it everywhere, or `.claude/skills/` inside one project. Start a new session and Claude picks it up. Claude Code renders the PNG on your own machine, so it needs Python with Playwright; Claude installs that the first time if it is missing. Put a `design.md` with your colours and fonts in the project and it uses that as your brand.

Your first infographic

1. Start a new chat and type `/` in the message box, then pick the Skill from the list.
2. If you have a Claude Design System for your brand, click *+* under the message box, then *Design system*, and choose it.
3. Paste your article, notes or a public link, and attach a square headshot.
4. Send. You get the PNG back, plus the HTML it was built from, and you can ask for changes in plain English.

Before you post, read every number back against your source and check your name and link are right. Claude built the graphic, but you are the one publishing it.

Make it yours

Two things make it yours. Your **brand** comes from design tokens, so you point it at your brand instead of editing colours. Your **details** go in the *Make it yours* block at the top of `SKILL.md`: your name, headline and photo, your company name and logo, which footer to use by default, and who your audience is. Fill it in once, re-zip the folder and upload it again under Customize, then Skills. Leave a line blank and Claude asks for it.

- **If your brand is a Claude Design System,** choose it under *+*, then *Design system*, when you make each infographic. Its tokens drive every visual decision.
- **If it is not,** say "take my colours and fonts from mycompany.com" in your first request, or paste your tokens. The Skill stops and asks rather than guessing at colours. In a code project it reads a `design.md` if there is one.

The house style lives in two sections of `SKILL.md`: *Visual approach* holds the notepad grid, the brush-stroke highlight and the line-art rule, and *Adaptive Footer Logic* switches the footer between a profile photo and a company logo. Edit, re-zip the folder (the folder, not the file inside it) and upload it again.

If something goes wrong

Problem	Fix
Upload fails	Zip the folder, not SKILL.md on its own. The folder name has to match the `name:` line inside it.
Claude never uses it	Open the Skill under Customize, then Skills, and check its toggle is on, and that *Create and edit files* is on under Settings, then Capabilities. Or call it directly by typing `/` and picking it.
It keeps asking for brand details	That is deliberate. Choose your Design System, give it a brand URL, or paste your tokens.
Wrong fonts in the image	Give exact Google Fonts names, such as Inter or Cormorant Garamond. It renders in a browser, so the font has to be one it can fetch.
Text overlaps or gets cut off	Ask for fewer sections. One image holds three to six at most.

Want it to move? The free infographic animator turns a finished infographic into a GIF. It works best with the HTML this Skill saves next to the PNG. More free Skills: goodvibemarketer.com/skills
