B2B LinkedIn Carousel Skill: install and customise

Sep 29, 2026 · @Andy

This Skill turns any article, post or report into a finished, on-brand LinkedIn carousel in one request. Install it once, fill in your details, pick your Design System, and every carousel comes out as a ready-to-post PDF in your brand, with your face on it.

What it does

You give Claude your content, and it gives you back a 6–10 page PDF, 1080×1350 px per page, ready to upload as a LinkedIn document post. You also get a PNG of each slide, a document title, a caption draft and two alternative hooks. Here are three slides it made from a Substack article:

Every carousel follows the same house style unless your Design System says otherwise: a faint notepad grid, a highlighter on one keyword in each headline, thin line-art diagrams, your face and name in the footer, and a follow or subscribe call to action on the last slide.

Why it's built for B2B

Most carousel templates are built to grab attention. This Skill is built to earn trust, because B2B buyers save and share content that makes them look smart to colleagues, not content that looks busy.

- **Proof over hype.** Every number shows its source on the slide. The Skill is told never to invent a statistic, quote or fact that isn't in your content.
- **One idea per carousel.** A 3,000-word article usually holds four carousels. The Skill finds the strongest single idea and leaves the rest out, so the swipe builds to one point.

- **Made to be saved.** Frameworks, before/after diagrams and a summary slide give buyers something to screenshot into their own deck. That is how B2B content spreads inside a buying committee.
- **Professional tone.** No emoji, no exclamation marks, no "game-changer".
- **A real person signs it.** Your face and name sit on every slide. B2B buyers trust people over logos.
- **Built for the feed.** LinkedIn shows carousels as PDF document posts. 1080×1350 px fills the most screen on mobile, and the Skill sizes every line of text to be read on a phone.

What you need

- A Claude account on any plan (Free, Pro, Max, Team or Enterprise).
- **Code execution** switched on. The Skill writes and renders code to make the PDF.
- The Skill file: `linkedin-carousel-builder.zip`. Don't unzip it.
- **Your brand's Design System in Claude** (recommended). This is where your colours, fonts, logo and footer live, so every carousel comes out on-brand without editing the Skill.
- A square headshot (JPG or PNG) for the footer, unless your Design System already includes one.
- Your newsletter name and URL, if you want the last slide to ask people to subscribe.

Install it in the Claude app

These steps work on claude.ai and in the Claude desktop app.

1. **Switch on code execution.** On Free, Pro or Max, go to **Settings** → **Capabilities** and turn on **Code execution and file creation**. On Team or Enterprise, an admin enables it under **Organization settings** → **Plugins & skills**, on the **Policy** tab.
2. **Open Skills.** Go to **Settings** → **Skills**.
3. **Upload the Skill.** Click **Upload skill** and choose `linkedin-carousel-builder.zip`.
4. **Check it's on.** Make sure the toggle next to **`linkedin-carousel-builder`** is on.

Install it in Claude Code

1. Unzip `linkedin-carousel-builder.zip`. You get a folder called `linkedin-carousel-builder` with a `SKILL.md` inside.
2. Move that folder into `~/.claude/skills/` to use it in every project, or into `.claude/skills/` inside one project to keep it there.
3. Start a new Claude Code session. Claude picks the Skill up automatically when you ask for a LinkedIn carousel.

Claude Code renders the PDF on your own machine, so it needs Python with Playwright. If it's missing, Claude will install it the first time.

Customise it to your details

You only edit one block, at the top of the Skill, headed **Make it yours**. Everything else stays as it is.

1. **Unzip the file** and open `SKILL.md` in any text editor (TextEdit, Notepad or VS Code).
2. **Fill in the block.** Type your value after each colon: your name, headline, photo file, call to action (follow or newsletter), newsletter name, URL and a one-line promise, slide count and any voice notes such as British spelling. The text after # is a hint, and you can delete it. Leave a line blank and Claude will ask for it each time instead.
3. **Pick your call to action.** Set `default_cta` to follow or newsletter. The newsletter version prints your URL large, because links inside PDF posts aren't reliably clickable on LinkedIn.
4. **Save the file.** Keep the name `SKILL.md` and leave it inside the `linkedin-carousel-builder` folder.
5. **Zip the folder again.** Zip the folder itself, not the file inside it. On a Mac, right-click the folder → **Compress**. On Windows, right-click → **Send to** → **Compressed (zipped) folder**.
6. **Re-upload it** the same way you installed it. The new version replaces the old one.

Your brand comes from your Design System, not the Skill. When you select your Design System (see **Use it**), its colours, fonts, spacing and footer override the Skill's defaults. There are no colours or fonts to type into the Skill.

Optional tweaks (change these lines in the block only if you want a different house style):

- `grid_background: off` removes the notepad grid.
- `title_highlight: off` removes the keyword highlighter.
- **Want the highlighter in a different brand colour?** Say so in your Design System's notes, for example "use teal for headline highlights". The Skill follows your Design System, so the change sticks for every carousel.

If your Design System has its own background or its own way of emphasising headline words, the Skill uses those instead of the grid and highlighter automatically.

Use it

Five steps from a new chat to a finished carousel:

1. **Start a new chat** and type / in the message box. Pick `linkedin-carousel-builder` from the list of Skills.
2. **Choose the output.** Open the **Output** dropdown under the message box and select **Design**.
3. **Choose your brand.** Select your brand's **Design System** from the list.
4. **Add your content.** Paste your article, report or a public link, and attach your headshot if your Design System doesn't have one. For example: Turn this article into a LinkedIn carousel. End with a subscribe call to action for my newsletter.

5. **Send.** Claude plans the slides, builds them in your brand and gives you the PDF, the slide images, a document title, a caption draft and two alternative hooks.

Then ask for changes in plain English: "make the underline a highlighter", "change the CTA line to Practical AI for real B2B marketing work", "use teal instead of coral", "cut it to seven slides".

Post it as a document: on LinkedIn, start a post, choose **Add a document**, upload the PDF and paste in the document title. Uploading the slides as images turns them into a grid, not a swipeable carousel.

Check before you post: every number is from your source and labelled, your name and URL are right, and the hook is the one you want. The Skill won't invent data, but you are the one publishing.

Troubleshooting

Problem	Fix
Upload fails	Zip the folder, not the `SKILL.md` on its own. The folder name must be `linkedin-carousel-builder`, the same as the `name:` line.
Upload says the description is too long	The `description:` line must stay under 200 characters. Put extra detail in the body, not there.
Claude never uses the Skill	Check the toggle in Settings → Skills and that code execution is on. Or call it directly by typing / and picking it.
It keeps asking for your name or newsletter	The Make it yours block is still blank. Fill it in and re-upload, or answer once per chat.
The carousel isn't in my brand	Select your Design System before you send. Without one, Claude builds a neutral version and tells you it's unbranded.
The highlight is the wrong colour	Ask for the colour you want. To make it permanent, say which colour to use for headline highlights in your Design System's notes.
LinkedIn shows a grid of images	Upload the PDF with Add a document, not the PNGs as images.
Text overlaps or gets cut off	Ask for "less text per slide" or "fewer slides". The Skill aims for 6–10 slides with one idea each.
